PROFILE

Enthusiastic Python developer with 2 years of experience, specializing in creating dynamic web applications and RESTful APIs using Django and DRF. Also completed over 10 successful freelance projects and actively contribute to various open-source projects. Additionally, experienced managing a team of 5 members and continually striving to stay up-to-date with the latest industry developments.

SKILLS

Python • Django • DRF • Fast Api • Docker • Celery • Redis • Sql • Mongo DB • Nginx

PROJECTS

Tsuna Streaming 🔗

Advanced streaming API system allows users to create channels, add administrators, and subscribe to channels. Users can add video/music to their channels, and other users can vote and comment on the content. The system is built using Django Rest Framework (DRF) and utilizes Redis for caching, Nginx for web serving, Pytest for testing, and Celery for background tasks.

Anon Market 🔗

An e-commerce project that allows users to trade anonymously using a custom website currency. In addition to facilitating secure transactions, the platform features real-time chat functionality, as well as a blog and forum system. The project is built using Django and utilizes PostgreSQL as the database, Nginx as the web server, Docker for containerization, and Django Channels for real-time communication. The resulting platform provides users with a seamless and engaging experience, while also prioritizing security and privacy.

Food Store 🔗

A food store system allows users to add restaurants and menu items, while also providing the ability for other users to purchase and order food items. The system is built using Django and utilizes PostgreSQL as the database, as well as Docker for containerization.
