SUMMARY

Software engineer, five years of Python, mostly backend. At Zebracat I work on the path from a prompt to a rendered video: jobs that retry on their own, model output that has to pass a schema, and Remotion templates that ship like code. I write about language-model systems once they have real users.

EXPERIENCE

Software Engineer · AI

SEP 2024 - PRESENT · REMOTE (BERLIN)

Zebracat · Generative text-to-video platform

- A failed scene no longer kills the render. Each step is a job on RabbitMQ, with its own state and its own retry.
- Scripts and scenes are generated, then checked against a schema. A bad response retries; it does not take the video down.
- Templates are Remotion — React rendered headlessly into frames. Changing one is a code change.
- Django and FastAPI services behind React and TypeScript.

Python · FastAPI · Django · RabbitMQ · Redis · React · TypeScript · Remotion · Docker · AWS

Full-Stack Developer

JUN 2021 - SEP 2024 · REMOTE

Freelance · SaaS and consumer web products

- Took client products from the data model through the API, the UI, and deploy, then stayed for the support.
- Django/DRF or FastAPI behind React, containerised, with monitoring in place before handover.
- Owned auth, access control, and how the data was stored — the parts a client could not audit themselves.

Django · DRF · FastAPI · React · PostgreSQL · Docker · Nginx

SELECTED OPEN SOURCE

229 stars across 23 public repositories · github.com/mohamad-liyaghi

FoodAnywhere 40 stars — Nearby restaurants, orders through the kitchen. PostGIS search, Celery for slow work, traces from request to worker.

Fast Commerce 22 stars — Async store API built for throughput — clean boundaries, background processing, tests that block a bad deploy.

AcademyMaster 21 stars — An academy's API: who can see what, and jobs that run on a schedule.

Tsuna 16 stars — Video and music streaming, with expensive processing off the request path.

Telegram → **Rubika** 14 stars — Go tool moving files up to 2 GB straight between platforms, so nobody re-uploads over limited bandwidth.

FastQuora 11 stars — Ask and answer — Elasticsearch on the search path, tracing through the cache.

SKILLS

LANGUAGES	Python, Go, TypeScript, SQL, Bash
BACKEND	Django, Django REST Framework, FastAPI, Celery, RabbitMQ, asyncio, REST, WebSockets
MODELS	LLM APIs, structured output, tool calling, RAG, vector search, evaluation
DATA	PostgreSQL (incl. PostGIS), Redis, Elasticsearch, MongoDB
FRONTEND	React, Tailwind, Remotion
INFRASTRUCTURE	Docker, Kubernetes, GitHub Actions, AWS, Nginx
RELIABILITY	OpenTelemetry, Prometheus, Grafana, Sentry, Pytest

WRITING

On agents, models, and the money around shipping them, published on Medium — Stop Being a Feature Factory (Aug 2026), How an Agent Squad Actually Works (Aug 2026), How Model Routing Actually Works (Jul 2026). Full archive: medium.com/@el_mohamad

EDUCATION & LANGUAGES

EDUCATION	B.Sc. Computer Science
LANGUAGES	Persian — native · English — professional working proficiency
